THE NICHOLS SCHOOL MASTER PLAN & RENOVATIONS Buffalo, New York

The project required total renovation of this turn-of-the-century urban school campus to accommodate coeducation as well as new educational concepts and curriculum for 600 students in grades 5-12.

The design minimized new construction and maximized better utilization of existing spaces resulting in major change of use to most of the school's larger spaces.

Accelerated design and construction document scheduling enabled the construction work to be completed during the three month summer recess, a full year ahead of the school's original target date.

Client: Nichols School of Buffalo
Buffalo, New York
